

ARVENTO INDUSTRY SPECIFIC SOLUTIONS

MOBILE WASTE TRACKING SYSTEM

Handling, control and auditing of hazardous wastes are critical actions, as they constitute a potential threat for human and environmental health. In this context, Arvento has specially developed for public services the **Mobile Waste Tracking System** that manages the process to handle and store hazardous wastes under municipal control, to obtain a sound database and inventory by way of proper recording and checking.

The system makes it possible to have an effective monitoring of the waste flow, preventing improper handling, recovery and disposal of wastes, detecting missing statements of waste producers, making sure a proper and complete reporting for these activities with the shortest possible reactions to such.

Details including current position of the vehicle, type and amount of waste it transports, the route it follows, and delivery date and address can be retrospectively tracked online. The system makes it possible to record information relating to each transportation operation at source, online tracking of loaded vehicles in navigation and effective monitoring and control of waste handling business as such. The system also helps register the licenses of waste handling companies and their vehicles online, detect missing declarations of hazardous waste producers, make proper and complete reporting and intervene emergency situations in the most urgent way possible. Thanks to the system in place throughout Turkey, handling and control of hazardous wastes in this country are checked in the most effective, safest and technological way possible.

Example Reference:

The system is in place and used by the Turkish Ministry of Environment and Urbanization as well as provincial directorates of environment.
